

Abstract

The invention relates to a drive for an adjustable motor vehicle part which has an electric motor (10), a worm drive which has a worm wheel (28) surrounded by a gearbox (36, 38; 136, 148), and electronic components (32, 34) for operation of the electric motor. At least the important part of the electronic components (32, 34) is located between the worm wheel (28) and the gearbox (38; 138).
